

ABSTRACT

The invention provides immunostimulatory compositions and methods of administration thereof. Also provided are methods of administering a tryptantrin compound in an effective amount to enhance the immune response of a subject to an antigen. Also provided are methods of administering an effective amount of a tryptantrin to stimulate the immune response in a subject for the treatment of cancer. Further provided are methods of administering a tryptantrin compounds as an immunotherapeutic in the treatment of infectious diseases.
